

Fully Configured Automation Packs

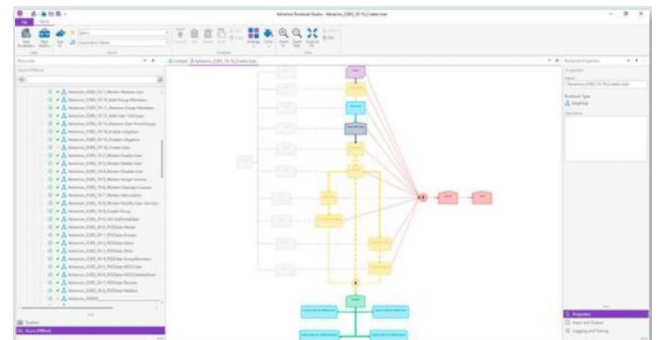

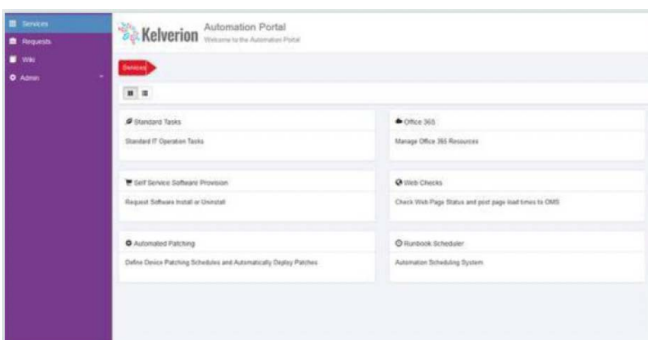

Out of the box solutions ready to implement directly into your organization, with proven ROI benefits.

Service Request Automation Overview

The Keverion Runbook Suite integrates your ITSM platform into the other enterprise management tools used in your business, to enable the automation of Service Requests directly from your ITSM software. The Runbook Suite provides a platform to integrate and orchestrate third party systems, enabling automation of day to day manual processes, which hinder and delay IT and Support Desk teams. The Suite contains a range of integration modules and ready built solutions to help automate these service requests, as well as providing a framework to automate any manual process.

Fully Configured Automation Packs

AFJ Solutions provide a set of Fully Configured Automation Packs, ready to be directly implemented into your organization. These solutions empower your Service Desk team to utilise automation, free up valuable human hours back into your organization and reduce costs. Time to value is increased by removing the need to build custom integrations for standard tasks, and by using the Keverion Value Calculator you can determine the specific areas that will deliver significant success to your organizations Automation journey through implementing one of our Fully Configured Automation Packs.
